Skills

Frontend

React.js, Next.js, Angular, Tailwind CSS, shadcn/ui, HTML & CSS, Flutter

Backend

Node.js, Express.js, RESTful APIs, Python, Resend

Databases

MongoDB, MySQL

Languages

JavaScript, TypeScript, C++, Python

AI & Automation

n8n (AI Automation), AI-Integrated Product Development

Tools

Jira, Git, OOP, SDLC, Agile

Education

Bahria University

E-8, Islamabad

BS Information Technology

2022 – 2026

KIPS College

G-9, Islamabad

Intermediate, Computer Science

2019 – 2021

Languages

English | Urdu

Profile

Full-stack developer experienced in the MERN stack, Next.js, and AI-driven automation. Currently building production SaaS and client products at an AI-focused software company, with a strong foundation in RESTful APIs, database design, and agile development.

Experience

ThinkAIWorks — Full Stack Developer

Islamabad, Pakistan

May 2026 – Present

- Build and ship scalable, end-to-end web applications using Next.js, React.js, Node.js, Express.js, MongoDB, TypeScript, Tailwind CSS, Resend, and REST APIs at an AI-driven software company.
- Developed a courier delivery management platform for an external client, covering order tracking, dispatch, and delivery workflows.
- Built an internal SaaS workforce management system featuring project/task management, attendance tracking, meeting scheduling, performance monitoring, and team collaboration.
- Used **n8n** to build AI-driven automation workflows, streamlining and automating processes within existing software systems.
- Collaborate closely with AI/product teams to integrate AI-driven features into products, continually adopting modern, high-performance technologies.

Decimal Solutions — Full-Stack Developer Intern

Islamabad, Pakistan

Dec 2025 – April 2026

- Tracked tasks, bugs, and development progress in Jira; identified and fixed low-level bugs to improve system stability and performance.
- Built reusable React components following component-based architecture and implemented efficient state management patterns.
- Developed small-scale applications including a weather app and a to-do list using React, Tailwind CSS, and shadcn/ui.
- Contributed to a blog management system using the MERN stack and Next.js/Node.js (TypeScript) features backed by MongoDB, gaining hands-on exposure to RESTful APIs, database integration, and frontend-backend communication.

PTCL — Web Developer Intern

Islamabad, Pakistan

Aug 2023 – Sep 2023

- Acquired foundational, practical knowledge of web development using Angular, focusing on modular and scalable application design.
- Collaborated with senior developers to design, test, and deploy responsive web interfaces, including signup and login pages, following industry standards.
- Assisted in debugging and testing to improve application performance, writing clean, maintainable code throughout.

Projects

ThinkAIWorks Next.js Node.js TypeScript MongoDB	View Project
A SaaS workforce management platform for project tracking, task assignment, attendance management, meeting scheduling, performance monitoring, and team collaboration.	
Teacher's Assistant Next.js Node.js TypeScript MongoDB	View Project
A web-based academic management system that enables instructors to organize courses, manage students, record assessments, and monitor performance.	
RiverCity Courier Next.js Node.js TypeScript MongoDB	View Project
A courier delivery management platform for shipment tracking, order management, dispatch operations, and secure user authentication.	
Shozani Next.js Node.js TypeScript MongoDB	View Project
A study abroad platform for exploring international education opportunities, managing applications, and connecting students with global institutions.	
Workspax Next.js Node.js TypeScript MongoDB	View Project
A SaaS-style workspace platform for managing projects, tasks, and team collaboration with a modern full-stack architecture.	
Mini-ERP Next.js Node.js TypeScript MongoDB	View Project
A lightweight enterprise resource planning system for managing inventory, operations, and business workflows.	
Blog Platform React Node.js MongoDB	View Project
A full-featured blogging platform with content creation, editing, and management built on the MERN stack.	
LMS (Final Year Project) Angular Python MySQL	View Project
A learning management system supporting course delivery, student tracking, and content management for academic institutions.	
LMS Mobile App Flutter	View Project
A cross-platform mobile companion app for the LMS, giving students on-the-go access to courses and progress.	
Weather App React.js	View Project
A real-time weather forecasting app with location-based search and a clean, responsive UI.	
ChatBot Python	View Project
A conversational chatbot built in Python for automated, rule-based user interactions.	
Flight Management System C++ (OOP)	View Project
A desktop application for managing flight bookings, schedules, and passenger records using object-oriented design.	
Police Station Database MySQL	View Project
A relational database system for managing police station records, case tracking, and personnel data.	
E-store React Node.js MongoDB	View Project
A full-stack e-commerce application with product listings, cart, and order management on the MERN stack.
